

The river GANGA was being cleaned by the government but the government was still not able to clean it, but now, when everyone is at home, the GANGA river is cleaned now, and not only Ganga, many other rivers are also cleaned and are crystal clear, and they flow throughout the country and make the country more beautiful. Because of this lockdown, all the industries and factories are closed and with this, the chemicals and drainage water is dumped into the rivers, but now all this is stopped and the rivers are much cleaner than ever before.

Not only this, but the air is also very clear. In this lockdown, all the industries and factories are closed and with this the pollution is stopped being added in the air. The pollution level is decreased from the AIR. The TAJ MAHAL was greatly affected by air pollution. Because it is made by marble and acid rain caused by pollution can react with the marble hence it can cause the change of colour of TAJ MAHAL. But now it is changing its colour a little bit.

I have heard that the ozone layer is also repairing itself during corona virus, and it is such a good news!

This CORONA VIRUS is a warning because this only spreads from human to human and only they are doing the harm to the environment. It does not spreads from animals, isn't it ?

So, at last, I think that this lockdown bought a great change in the environment but, it also is a warning and we should definitely learn from it that how to respect and protect the nature. This lockdown is also a great opportunity to help in the healing of the NATURE .

THANK YOU
